

Pet Chews

Serbia requires the bilingual “HEALTH CERTIFICATE For dogchews intended for dispatch to or for transit through the Republic of Serbia (RS)” for the import (or transit) products for pet animals to chew, produced from untanned hides and skins of ungulates or from other materials of animal-origin. The European Union Regulation on which this certificate is based defines "dog chews" as products for pet animals to chew, produced from untanned hides and skins of ungulates or from other materials of animal-origin. Therefore, use of this certificate is not limited to only chews for dogs (despite the title).

This certificate mimics the requirements of the Regulation (EC) 142/2011 (as amended) “CHAPTER 3(C) Health certificate For dogchews intended for dispatch to or for transit through the European Union”. Prior to endorsement of the “HEALTH CERTIFICATE For dogchews intended for dispatch to or for transit through the Republic of Serbia (RS)” the pertinent exporting/processing facilities must be approved by APHIS Veterinary Services for endorsement of the Regulation (EC) 142/2011 (as amended) “CHAPTER 3(C) Health certificate For dogchews intended for dispatch to or for transit through the European Union”. For information on how to receive this required approval, a facility should contact the [Veterinary Services service center](#) covering the area where the facility is located.
